Ecology and Power in the Age of Empire provides the first wide-ranging environmental history of the heyday of European imperialism, from the late nineteenth century to the end of the colonial era. It focuses on the ecological dimensions of the explosive growth of tropical commodity production, global trade, and modern resource management-transformations that still visibly shape our world today-and how they were related to broader social, cultural, and political developments in Europe's colonies.

Online Library Age Of European Imperialism

Covering the overseas empires of all the major European powers, Corey Ross argues that tropical environments were not merely a stage on which conquest and subjugation took place, but were an essential part of the colonial project, profoundly shaping the imperial enterprise even as they were shaped by it. The story he tells is not only about the complexities of human experience, but also about people's relationship with the ecosystems in which they were themselves embedded: the soil, water, plants, and animals that were likewise a part of Europe's empire. Although it shows that imperial conquest rarely represented a sudden bout of ecological devastation, it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment. By relating the expansion of modern empire, global trade, and mass consumption to the

Section 4 Overview
momentous ecological shifts that they entailed, this book provides a historical perspective on the vital nexus of social, political, and environmental issues that we face in the twenty-first-century world.

In the eyes of both contemporaries and historians, the United States became an empire in 1898. By taking possession of Cuba and the Philippines, the nation seemed to have reached a watershed moment in its rise to power—spurring arguments over whether it should be a colonial power at all. However, the questions that emerged in the wake of 1898 built on long-standing and far-reaching debates over America's place in the world. Andrew Priest offers a new understanding of the roots of American empire that foregrounds the longer history of perceptions of European powers. He traces the development of American

Online Library Age Of European Imperialism

thinking about European imperialism in the years after the Civil War, before the United States embarked on its own overseas colonial projects. Designs on Empire examines responses to Napoleon III's intervention in Mexico, Spain and the Ten Years' War in Cuba, Britain's occupation of Egypt, and the carving up of Africa at the Berlin Conference. Priest shows how observing and interacting with other empires shaped American understandings of the international environment and their own burgeoning power. He highlights ambivalence among American elites regarding empire as well as the prevalence of notions of racial hierarchy. While many deplored the way powerful nations dominated others, others saw imperial projects as the advance of civilization, and even critics often felt a closer affinity with European imperialists than colonized peoples. A wide-ranging

Online Library Age Of European Imperialism

book that blends intellectual, political, and diplomatic history, *Designs on Empire* sheds new light on the foundations of American power.

This encyclopedia traces the spread of European political and economic dominance throughout the world in the century between the Napoleonic Wars and World War I.

Much of the historical debate surrounding the partition of Africa, the events that led up to it and its implications for the continent itself and for the rest of the world is so controversial that it is difficult to provide a coherent survey of the shifting theories of the last twenty years. In this pamphlet Dr MacKenzie attempts to do this, by sketching the historical background to the partition, surveying the events of the partition in the four main

Online Library Age Of European Imperialism

regions of Africa and then examining in turn the theories produced to explain the sequence of events.

"The men who founded these great civilizations are long gone, but their blood still lives within us. We are called to conquer. Our age, like every other age, is a war of all against all for the domination of space." Throughout the 19th and through the early 20th centuries, the European Great Powers established direct control over the majority of the planet, and suzerainty over the rest. Despite the crumbling of those empires under the hammer blows of two world wars and the machinations of the United States and the Soviet Union, the feats by which they were established and the titanic efforts of the brave few that fought to preserve them

Online Library Age Of European Imperialism

still reverberate in history. Brave warriors conquered foreign lands, planted their flags, and tried to grow new cultures that mirrored their own. Sinclair Jenkins - writer, thinker, and dissident - lays out a resolute defense of, and advocacy for, that force of will which made the age of European Imperialism possible. From the conquering of the American West, to the bloody Rif War, to the heroic defenses of Katanga and Rhodesia, *Empire Eternal: In Defense of Imperialism* is a tour de force of the various chapters of European Imperialism. It is said that men did not love Rome because it is great - Rome was great because men loved her. These pages make it clear that likewise the European empires were not great because of some kind of overwhelming material superiority, but because of the eternal flame that pushed men to sacrifice for them - a flame that can never be

Online Library Age Of European Imperialism extinguished. Section 4 Guided

This volume contains a series of essays aimed at illuminating the theory, history, and roots of imperialism, which extend the analysis developed in Magdoff's *The Age of Imperialism*.

The Ottoman Scramble for Africa is the first book to tell the story of the Ottoman Empire's expansionist efforts during the age of high imperialism. Following key representatives of the sultan on their travels across Europe, Africa, and Arabia at the close of the nineteenth century, it takes the reader from Istanbul to Berlin, from Benghazi to Lake Chad Basin to the Hijaz, and then back to Istanbul. It turns

Online Library Age Of European Imperialism

the spotlight on the Ottoman Empire's expansionist strategies in Africa and its increasingly vulnerable African and Arabian frontiers. Drawing on previously untapped Ottoman archival evidence, Mostafa Minawi examines how the Ottoman participation in the Conference of Berlin and involvement in an aggressive competition for colonial possessions in Africa were part of a self-reimagining of this once powerful global empire. In so doing, Minawi redefines the parameters of agency in late-nineteenth-century colonialism to include the Ottoman Empire and turns the typical framework of a European colonizer and a non-European colonized on its head. Most importantly, Minawi offers a radical revision of nineteenth-century Middle East history by providing a counternarrative to the "Sick Man of Europe" trope, challenging the idea that the Ottomans were passive
