Part of the Garmin ConnexT® family of flight connectivity solutions, the Flight Stream 110/210 is a small wireless gateway that is easily installed in your aircraft, enabling a combination of up to 2 compatible tablets or phones to stream information to and from your avionics system via Bluetooth®.The Flight Stream 110 offers GPS, weather and traffic streaming from the GDL 84 or GDL 88 ADS-B ...

Compiled by leading authorities, Aerospace Navigation Systems is a compendium of chapters that present modern aircraft and spacecraft navigation methods based on up-to-date inertial, satellite, map matching and other guidance techniques. Ranging from the practical to the theoretical, this book covers navigational applications over a wide range of aerospace vehicles including aircraft, spacecraft and drones, both remotely controlled and operating as autonomous vehicles. It provides a comprehensive background of fundamental theory, the utilisation of newly-developed techniques, incorporates the most complex and advanced types of technical innovation currently available and presents a vision for future developments. Satellite Navigation Systems (SNS), long range navigation systems, short range navigation systems and navigational displays are introduced, and many other detailed topics include Radio Navigation Systems (RNS), Inertial Navigation Systems (INS), Homing Systems, Map Matching and other correlated-extremalsystems, and both optimal and sub-optimal filtering in integrated navigation systems.

The hard copy edition package contains a boxed five volume set with a separate Veterinary volume, a CD-ROM and access to a comprehensible, regularly updated website. Both the CD-ROM and online formats have networkable capacity. In more detail this set comprises: i) four volumes detailing all current UK pharmacopoeial standards for medicines for human use; ii) a companion volume providing standards for substances, preparations and immunological products used in veterinary medicine; and iii) a fully searchable CD-ROM which contains the contents of these volumes in electronic form together with a user manual, as well as the British Approved Names 2002 and supplements; iv) British pharmacopoeia chemical reference substances catalogue 2006-2007. The Pharmacopoeia is published on the recommendation of the Medicines Commission in accordance with the Medicines Act 1968. This edition is effective from 1 January 2007 and it incorporates the requirements of the 5th edition of the European Pharmacopoeia 2004 and its supplements. The British Pharmacopoeia (BP) 2007 is the authoritative, current collection of standards for UK medicinal substances and the official source of all UK quality standards. It is an essential reference for anyone involved in pharmaceutical Research & Development, manufacturing and testing, and plays a vital role in ensuring that all medicinal substances on the UK market meet standards of safety, quality and efficacy. The key features of this new edition are: extensive revisions including 30 new BP texts; new supplementary chapters containing general guidance on unlicensed medicines and method validation; the first BP monograph for traditional Chinese medicines; all European Pharmacopoeia 5th edition material up to and including Supplement 5.5 integrated into the text of BP 2007; value-for-money networking with full technical support from the publishers; CD-ROM and website deliver the complete text of the British Pharmacopoeia, British Approved Names and European Pharmacopoeia standards directly to your PC: [www.pharmacopoeia.co.uk](http://www.pharmacopoeia.co.uk) is regularly updated and includes information on monograph development and contact points.

Humans are part of an ecosystem, and understanding our relationship with the environment and with other organisms is a prerequisite to living together sustainably. Zoonotic diseases, which are spread between animals and humans, are an important issue as they reflect our relationship with other animals in a common environment. Zoonoses are still presented with high occurrence rates, especially in rural communities, with direct and indirect consequences for people. In several cases, zoonosis could cause severe clinical manifestations and is difficult to control and treat. Moreover, the persistent use of drugs for infection control enhances the potential of drug resistance and impacts on ecosystem balance and food production. This book demonstrates the importance of understanding zoonosis in terms of how it allows ecosystems to transform, adapt, and evolve. Ecohealth/One Health approaches recognize the interconnections among people, other organisms, and their shared developing environment. Moreover, these holistic approaches encourage stakeholders of various disciplines to collaborate in order to solve problems related to zoonosis. The reality of climate change necessitates considering new variables in studying diseases, particularly to predict how these changes in the ecosystems can affect human health and how to recognize the boundaries between medicine, veterinary care, and environmental and social changes towards healthy and sustainable development.

The book received the Emme Award for Astronautical Literature at the March 20 2000 luncheon of the Goddard Memorial Symposium, sponsored by the American Astronautical Society. Named in honor of the first NASA Historian, Eugene Emme, the Emme award was created in 1982 to annually recognize an outstanding book that increases public understanding of the past and potential impact of the field of astronautics.
