DNS Analysis Using Wireshark | Network Computing

Step 1: Filter DNS packets. In the Wireshark main window, type dns in the entry area of the Filter toolbar and press Enter. Note: If you do not see any results after the DNS filter was applied, close the web browser. In the command prompt window, type ipconfig /flushdns to remove all previous DNS results. Restart the Wireshark capture and repeat the instructions in Part 2b –2e.
